Module 5

Camera Operation
There is a camera installed on the front of the drone, and the video stream is visible through the video feed.

While navigating, it is highly recommended to consistently monitor the camera for obstacles using the video feed.
You can switch between the video feed window and map window by pressing the switch view button.

It will reduce the size of the video feed window and move the window to the left down corner.
Manual Control App – Camera Operation

- Pressing the view switch button once more will swap the 2 windows back again.
- It will increase the size of the video feed window again.
Manual Control App – Camera Operation (Video)
Congratulations!
